

Nieuw Lef

Technical Rider: “Mirlen’s Mad Ride”

Required surface for performance:

- Front: total of 8 meters (including; adze, caravan and tent)
- Depth: 5 a 6 meter (considering “frontgarden” for easy access for the public)
- Towers: 5 meters high

Caravan data:

- Length: 4,25 meters built up plus 1,35 meters adze = 5,60 total length
- Width: 2,17 meters
- Hight: 2,30 meter

electricity: 220 volt 16 A 2000W

Attention: Surface needs to be “horizontal” !!!

The total surface of caravan and tent needs to be straight. Meaning no curves or other differences in hight. In the tent (backside caravan) there’s a construction that needs tro be placed paralell and horizontal to the caravan, otherwise it’s impossible to get people into the performance. Little adjustments can be made, but the more horizontal, the better.
